

Abstract

Improvements in or relating to the Devices

5 A bottle for dispensing two liquids, the bottle
comprising two reservoirs, one for each liquid, a
nozzle through which the liquids are dispensed from
the bottle, a passageway from each reservoir leading
out of the nozzle, and a deflector plate between the
10 two passageways and projecting from the end of a
nozzle in a direction substantially parallel to the
direction of flow from the nozzles thereby causing the
liquid leaving one passageway to be deflected towards
the liquid leaving the other passageway so that the
15 two liquids first mix once they have passed the
deflector plate.
